(EN 14387, 133, 140, 149)

! Hand protection

Gloves (alkali-resistant)

The glove material (EN 374) must be impermeable and resistant to the product. The protective glove should always be checked to make sure it is suitable for the specific intended workstation (e.g. mechanical resistance, product compatibility).

Heed the manufacturer's specifications regarding permeability and breaching time, as well as instructions and information concerning application, storage and care.

The protective gloves should be replaced immediately if damaged or when first signs of wear appear. Design working cycles in such a way that gloves do not have to be worn permanently.

Since the product is made of several materials, the resistance of the glove materials cannot be predicted in advance and must be checked before use.
